VALUE PROPOSITION

Now More Than Ever Innovation Is The Key Priority

79% Of Companies Rank Innovation As A Top-three Priority this year
90% Of Companies Plan To Increase Innovation Spending in 2025-2028

How will your company's innovation, R&D, and product development spending change this year in response to macroeconomic factors? (%)

Sources: BCG Global Innovation Survey 2023; BCG analysis.

Total shareholder return

Sources: BCG Innovation Journey Analytics Database; CapitalIQ.

“The question isn’t whether innovation through AI can have an **impact**. It’s whether companies are **efficiently implementing AI** for use cases with the **potential to drive business value**”

Many companies are using AI to support innovation, but few are achieving impact

How would you rate your company’s skill at leveraging big data, advanced analytics, and AI to help with innovation? (%)

Sources: BCG Global Innovation Survey 2023; BCG analysis.

Which technology categories are you investigating in this year (%)

Sources: BCG Global Innovation Survey 2023; BCG analysis.

Why AKAIO? Companies need help driving growth through better ideas, faster execution and rapid transformation

Market Pressure

Company Issue

Wall Street expects growth

•-----• **Growth** •-----• Growth is a strategic imperative

Companies are expected to drive disruptive growth

•-----• **Bigger and Bolder Ideas** •-----• *Need higher impact ideas that Move-the-Needle*

Companies have less & less time to go-to market

•-----• **Faster & Cheaper Execution** •-----• *Need to get to market quicker, with less investment*

Companies' life expectancies have declined to 2-3 decades

•-----• **Respond & Adapt** •-----• *Need foresight to start transformation earlier*

TARGET MARKET - TYPE

Market Segment and Pricing

Highly desired by a range of market segments with a total market size of \$4 Billion (conservative scenario)
Applies to all industries

	 Large Corporates	 Medium sized companies	 Academia	 Innovation Hubs & Districts	 Consulting companies	 Economic Clusters for Emerging industries	 Public/Private capital	 Early-stage start-ups	
About	Established companies with significant market presence, resources, and influence in their industries.	Companies with \$100M to \$1B wanting to drive accelerated growth and beginning to invest in innovation	Educational and research institutions that contribute to knowledge creation and innovation.	Innovation hubs and districts focus on fostering innovation. They provide resources, networking opportunities, and support for startups and companies.	Provide expert advice to organizations about their pressing business challenges & could leverage the tool to drive accelerated research	Economic clusters are geographic concentrations of interconnected businesses, suppliers, and associated institutions in a particular field.	Financial markets where securities are traded, and capital is raised for businesses and governments.	Newly established companies, often with innovative business models or technologies, seeking rapid growth	
Assumption	- Fortune 5000 companies - Average 4 Business Units => 20,000 Clients	~50,000 Medium Sized companies - Lower willingness to pay	Top 5000 research focused universities globally	141 smart cities 200 tech parks 100 I-Districts 5000 Accelerators	- Top 30 consulting firm 100 projects per firm ~10K per project	~100 Special economic hubs globally	~5000 Private capital market players	~75000 US based pre-series A startups	
Kyra Fee	\$ 100K	\$20K	\$100K	\$100K	\$50K per project	\$100K	\$10K	\$2K	Total Market
Segment Size	\$ 2B	\$ 1B	\$500M	\$500M	\$150 M	\$10M	\$50M	\$150M	\$4.4B

NOTE : Definitions : ARR – Annual Recurring Revenue

ESTIMATIONS: 2028: revenue / segment size 2.3% and \$40K pricing

AKAIO will focus on large corporate clients who have urgency to innovate and budgets to pay for innovation

MARKET TARGET SEGMENT

Key Insights

- Corporates is the best segment to target because they are big, desires innovation and has propensity to pay
- Medium sized enterprise segments has similar needs and desire to become large corporates
- Target Academia and Innovation hubs opportunistically

TARGET MARKET - SEGMENT

We have identified key strategic industries based on the need for innovation investment, but applies to all industries

TARGET INDUSTRY FOR AKAIO PLATFORM

AKAIO key strategic Industries

Trends with High Impact

Retail

E-commerce Growth
Digital Transformation
AI

Healthcare

AI
Biotechnology
Healthcare Reform

Energy

Renewable Energy
Energy Efficiency
Climate Change

Banking

Cybersecurity
Digital Transformation
Blockchain

Innovation Opportunities

1. Personalized shopping experiences with AI and data analysis: Tailoring product recommendations and offers to individual preferences.
2. Omnichannel retail strategies: Seamlessly integrating online and offline shopping experiences.
3. Autonomous delivery robots and drones: Improving delivery efficiency and reducing costs.

1. Personalized medicine and gene editing: Tailoring treatments to individual patients based on their genetic makeup.
2. Telemedicine and remote patient monitoring: Expanding access to healthcare through digital technologies.
3. AI-powered drug discovery and development: Accelerating the development of new treatments and cures.

1. Decentralized energy grids with blockchain: Enabling peer-to-peer energy trading and microgrids.
2. Smart grids and AI-powered energy management: Optimizing energy consumption and distribution.
3. Energy storage solutions: Developing advanced batteries and other technologies to store renewable energy.

1. Decentralized finance (DeFi) platforms: Offering financial services without intermediaries using blockchain technology.
2. AI-powered personalized financial advice: Providing tailored financial planning and investment recommendations.
3. Biometric authentication and fraud prevention: Enhancing security and customer experience through advanced identity verification.

Competencies

- AI/ML
- Data analytics
- Customer relationship management
- E-commerce
- Retail operations
- Supply chain management
- Robotics
- Drone technology
- Logistics

- Genetics
- Bioinformatics
- Medical ethics
- Telehealth technologies
- Data privacy
- Patient care
- AI/ML
- Drug discovery
- Biostatistics

- Blockchain development
- Energy trading
- Grid management
- Data analytics
- AI/ML
- Electrical engineering
- Battery technology
- Materials science
- Renewable energy integration

- AI/ML
- Data analysis
- Cosmetic science
- AR/VR development
- 3D modelling
- UX/UI design
- Sustainable packaging design
- Supply chain management

AKAIO Applies To All Industries

Trends with High Impact

Innovation Opportunities

Competencies

Nutrition

Health and Wellness
Biotechnology
Sustainable Packaging

1. Personalized nutrition plans based on genetics and lifestyle: Providing tailored dietary recommendations for optimal health.
2. AI-powered health monitoring and coaching: Using wearable devices and data analysis to track and improve health outcomes.
3. Sustainable and functional food packaging: Developing packaging that extends shelf life and provides health benefits.

- Nutrition science
- Genetics
- Personalized health
- AI/ML
- Wearable technology
- Health coaching
- Sustainable packaging design
- Food science
- Materials science

Construction

Sustainable Construction
Materials
Automation
3D Printing

1. Modular and prefabricated construction: Increasing efficiency and reducing waste by assembling buildings from pre-made components.
2. Robotics and automation for construction tasks: Improving safety and productivity on construction sites.
3. 3D printing of buildings and structures: Enabling faster and more customized construction processes.

- Prefabrication techniques
- Supply chain management
- Building information modeling (BIM)
- Robotics, Automation engineering
- Construction safety
- 3D printing technology
- Materials science
- Structural engineering

Real Estate

Urbanization, Sustainable
Construction Materials
Smart Textiles

1. Smart buildings with IoT and AI: Creating energy-efficient and responsive buildings that adapt to occupant needs.
2. Proptech platforms for property management and transactions: Streamlining real estate processes and improving customer experience.
3. Sustainable and resilient building design: Creating buildings that minimize environmental impact and withstand climate change.

- Building automation
- IoT sensor networks
- AI/ML
- Real estate technology
- Software development
- UX/UI design
- Sustainable architecture
- Green building materials
- Climate resilience

Beauty

E-commerce Growth
Social Media Influence
Sustainable Packaging

1. Personalized beauty products using AI and data analysis: Creating custom formulations based on individual skin types and preferences.
2. AR/VR experiences for virtual try-on and product visualization: Enhancing online shopping experiences.
3. Sustainable and refillable packaging solutions: Reducing waste and environmental impact.

- AI/ML
- Data analysis
- Cosmetic science
- AR/VR development
- 3D modelling
- UX/UI design
- Sustainable packaging design
- Materials science
- Supply chain management

AKAIO Applies To All Industries

Trends with High Impact

Innovation Opportunities

Competencies

Academia

Digital Transformation,
AI in Design,
Technological Advancements

1. Personalized AI-powered learning platforms: Tailoring educational content and pace to individual student needs.
2. Immersive VR/AR learning experiences: Creating engaging simulations and virtual field trips for deeper understanding.
3. Decentralized education using blockchain: Offering verifiable credentials and flexible learning pathways.

- AI/ML expertise
- Learning design
- Educational psychology
- VR/AR development
- 3D modeling, Instructional design
- Blockchain development,
- Cryptography
- Decentralized systems design

Government

Sustainable Construction
Materials
Automation
3D Printing

1. AI-powered public services and citizen engagement: Improving efficiency and accessibility of government services.
2. Blockchain for secure data management and voting: Enhancing transparency and trust in government processes.
3. Smart cities and sustainable urban development: Using technology to improve quality of life and reduce environmental impact.

- Public administration
- AI/ML
- Data analytics
- Blockchain development
- Cybersecurity
- Public policy
- Urban planning
- Sustainable development
- Smart city technologies

Pharmaceuticals

AI
Biotechnology
Healthcare Reform

1. Personalized medicine and gene therapy: Tailoring treatments to individual patients based on their genetic makeup and developing gene therapies for previously incurable diseases.
 2. AI-powered drug discovery and development: Accelerating the development of new treatments and cures using AI and machine learning for drug design, and clinical trial optimization.
 3. Digital health and remote patient monitoring: Utilizing wearable sensors, telemedicine, and digital platforms to improve patient care, monitor treatment adherence, and enable proactive interventions.
- Genomics
 - Bioinformatics
 - Pharmacogenomics
 - Gene editing technologies (e.g., CRISPR)
 - AI/ML
 - Data science
 - Cheminformatics
 - Biostatistics

Legal

AI
Digital Transformation
Cybersecurity

1. AI-powered legal research and document analysis: Automating routine tasks and improving efficiency.
 2. Online dispute resolution platforms: Providing accessible and efficient ways to resolve legal disputes.
 3. Smart contracts and blockchain for legal agreements: Automating contract execution and increasing transparency.
- Legal tech
 - AI/ML
 - Natural language processing
 - Online dispute resolution
 - Mediation
 - Legal ethics
 - Blockchain development
 - Smart contracts
 - Legal frameworks

AKAIO Applies To All Industries

Innovation Opportunities

1. Personalized beauty products using AI and data analysis: Creating custom formulations based on individual skin types and preferences.
2. AR/VR experiences for virtual try-on and product visualization: Enhancing online shopping experiences.
3. Sustainable and refillable packaging solutions: Reducing waste and environmental impact.

1. Bio-based and renewable chemical feedstocks: Replacing fossil fuels with sustainable sources for chemical production.
2. AI-driven chemical process optimization: Improving efficiency and reducing waste through data analysis and machine learning.
3. Closed-loop recycling systems: Creating circular economies where waste is minimized and materials are reused.

1. Digital twins and predictive maintenance: Using virtual models of physical assets to optimize performance and prevent downtime.
2. 3D printing and additive manufacturing: Creating customized and complex parts on demand.
3. AI-powered quality control and defect detection: Improving product quality and reducing waste.

1. Subscription-based car ownership models: Offering flexible access to vehicles instead of traditional purchases.
2. Integrated mobility platforms: Combining various transportation modes (cars, bikes, public transit) into seamless user experiences.
3. Vehicle-to-everything (V2X) communication: Enabling cars to communicate with each other and infrastructure to improve safety and traffic flow.

Competencies

- E-commerce strategy
- Digital marketing
- Customer relationship management
- AI/ML
- Data analytics
- Consumer behaviour
- Packaging design
- Material science
- UX/UI design

- Data analysis
- IoT sensor networks
- Robotics and automation
- Hydroponics
- Plant science
- Controlled environment agriculture
- Biotechnology
- Cellular biology
- Tissue engineering

- Industrial IoT
- Simulation modelling
- Data analytics
- 3D printing
- Additive manufacturing
- Materials science
- AI/ML
- Computer vision
- Quality control

- Business model innovation
- Customer relationship management
- Data analytics
- Software engineering
- Systems integration
- Telecommunications
- Network security
- Embedded systems

Innovation Opportunities

1. Bio-based and compostable polymers: Developing sustainable alternatives to traditional plastics.
2. Chemical recycling of plastics: Breaking down plastics into their original building blocks for reuse.
3. AI-powered sorting and recycling technologies: Improving the efficiency and effectiveness of plastic recycling processes.

1. Autonomous mining equipment and robotics: Improving safety and efficiency in mining operations.
2. Blockchain for mineral traceability and ethical sourcing: Ensuring responsible and transparent supply chains.
3. Urban mining and recycling of metals: Recovering valuable metals from electronic waste and other urban sources.

1. Bio-based and renewable chemical feedstocks: Replacing fossil fuels with sustainable sources for chemical production.
2. AI-driven chemical process optimization: Improving efficiency and reducing waste through data analysis and machine learning.
3. Closed-loop recycling systems: Creating circular economies where waste is minimized and materials are reused.

1. Autonomous aircraft for passenger and cargo transport: Developing self-flying planes to improve efficiency and safety.
2. Space tourism and commercial space travel: Expanding access to space for both leisure and business purposes.
3. Sustainable aviation fuels and electric propulsion: Reducing the environmental impact of air travel.

Competencies

- Polymer science
- Biochemistry
- Sustainable materials
- Chemical engineering
- Recycling technologies,
- Process optimization
- AI/ML
- Robotics
- Waste management

- Robotics,
- Automation engineering
- Mining engineering
- Blockchain development
- Supply chain management
- Ethical sourcing
- Metallurgy
- Recycling technologies
- Environmental engineering

- Biochemistry
- Chemical engineering
- Sustainable sourcing
- Data analysis

Sustainable Practices

Innovation Opportunities

1. Vertical farming and indoor agriculture: Growing plants in controlled environments to optimize resource use and yield.
2. Robotics and automation in horticulture: Automating tasks like planting, harvesting, and monitoring.
3. AI-powered plant health monitoring and diagnostics: Improving crop health and yields through data analysis and early disease detection.

1. Precision agriculture with AI and robotics: Optimizing crop yields and resource use through data-driven decision-making and automated farming.
2. Vertical farming and urban agriculture: Growing food in controlled environments closer to consumers.
3. Cellular agriculture and lab-grown meat: Producing meat and other agricultural products without traditional farming methods.

1. AI-driven hyper-personalization: Dynamically creating and delivering ads tailored to individual preferences in real-time.
2. Immersive AR advertising experiences: Overlaying interactive ads onto the real world through smartphones or AR glasses.
3. Blockchain-based advertising platforms: Increasing transparency and trust in ad delivery and payment systems.

1. Virtual reality (VR) and augmented reality (AR) travel experiences: Allowing travellers to explore destinations and attractions virtually.
2. Personalized travel planning and booking platforms: Using AI to create custom itineraries and recommend activities.
3. Sustainable and responsible tourism initiatives: Minimizing environmental impact and supporting local communities.

Competencies

- Controlled environment agriculture
- Plant science
- Hydroponics
- Robotics
- Automation engineering
- Agricultural technology
- AI/ML
- Data analysis
- Plant pathology

- Data analysis
- IoT sensor networks
- Robotics and automation
- Hydroponics
- Plant science
- Controlled environment agriculture
- Biotechnology
- Cellular biology
- Tissue engineering

- Data science
- AI/ML in marketing
- Consumer behaviour analysis
- AR/VR development
- 3D design
- UX/UI design
- Blockchain development
- Smart contracts
- Cybersecurity

- VR/AR development
- Content creation
- Travel technology
- AI/ML
- Data analytics
- Travel planning
- Sustainable tourism
- Community development
- Environmental management

PERSONA

Five key persona types have been identified as specific economic buyers of AKAIO

Growth Focused CEO

Name : Sarah Chen

Position : Chief Executive Offer

Age : 52

Education :

- MBA, Harvard Business School
- BS in Economics from Yale University

Tech attitude :
Early Majority

Innovation Head

Name : Miguel Rodriguez

Position : Chief innovation officer

Age : 45

Education :

- MS in Innovation management, Stanford University
- BS in Computer Science, MIT

Tech attitude :
Early Adopter

Strategy Manager

Name : Aisha Patel

Position : Senior Strategy Manager

Age : 38

Education :

- MBA, INSEAD
- BA in International Relations from London School of Economics

Tech attitude :
Early Majority

Chief Technology Officer

Name : Dr. Alex Thompson

Position : Chief Technology Officer

Age : 49

Education :

- Ph.D in Computer Science, Carnegie Mellon University
- MS in Electrical Engineering from UC Berkeley

Tech attitude :
Innovator

Head of R&D

Name : Dr. Emma Larsson

Position : Head of Research & Development

Age : 55

Education :

- Ph.D in Biochemistry from Oxford University
- MS in Molecular Biology from ETH, Zurich

Tech attitude :
Early Adopter

PRODUCT & PRICING

AKAIO uses a proven methodology, proprietary data and AI to help companies drive growth through innovation

AKAIO AI-Powered Innovation Ecosystem Platform

Methodology

Proven and globally recognized innovation methodology to drive sustained growth and competitive advantage

Proprietary Data

- Trends
- Future Scenarios
- Concept generation
- Unique clusters
- Competencies

AI Tools

AI powered grouping and clustering, insights, strategic choices, prioritization and matchmaking

Helps Companies Drive

Growth

Bigger and Bolder Ideas

Faster & Cheaper Execution

Respond & Adapt

AKAIO Platform – Key Features

Competences and Matchmaking

PRICING

Akaio pricing is dependent on customer needs and customizing the solution for each customer results in a price range between \$50K and \$300K

AKAIO is currently testing its product in the market

Already some sales traction in Q1 2025

Modules

Oracle

*"Where is my next **strategic growth** going to come from?"*

Available NOW

Match-making

*"Can I find **strategic partners** to accelerate my time to market & reduce risks?"*

Available on Commitment

Complete Suite

"Which opportunities can provide me quick growth & How do I develop that?"

Coming Up in June 2025

Features

- Your Company Page capturing your company information
- Trends allowing for scenarios mapping & competences per scenario

- Competency Identification that enable extraction of competency from trends and finding matches
(Currently ~30K competencies and ~100K partners)
- Partner identification

- Complete suite consisting of :
- Trends Module
- Competency Module
- Opportunity Areas
- Business Concepts

Current solutions provide insights, ideation programs, or databases, but often lack comprehensive capabilities for integrated innovation management

Frequently asked questions

1. **How does AKAIO differ from other AI platforms like OpenAI?**

Foundation models offer basic inference but are trained on general internet data, which can be inaccurate and risky for strategic decisions without further training on curated data. They also rely on user-created prompts, lacking a pre-defined process. Akaio uses curated, high-quality content from experts and credible databases, ensuring reliable insights and a proven methodology for identifying innovation opportunities. Akaio is also a cost-effective alternative to expensive market data subscriptions used for building proprietary models on foundation models.

2. **Which databases does AKAIO use to identify potential partners for matchmaking?**

Our databases are constantly evolving. Currently, we use publicly available company information to match entities with relevant opportunities. This includes things like matching labs and academic departments with research opportunities based on their assets and researchers' focus areas, or startups with funding and founder details or corporates offering their core products. Eventually, we'll allow self-registration, enabling entities to engage with the innovation ecosystem, find partners, and identify opportunities—a win-win for all.

3. **Can we customize the databases used to source information, for example, when identifying potential partners?**

Yes. During our beta phase, all requests must be submitted via support ticket. We plan to add features for inviting stakeholders to improve collaboration and visibility. Eventually, all users will be able to add documents and trends, building their own innovation universe on our platform.

4. **Can I define my own trends?**

We'll soon add features to let you create new trends, even using AI assistance. For now, we're happy to add them for you via support ticket.

5. **Can I only find start-ups within the data?**

Our system currently lets you find organizations and entities. Soon, we'll add filters to the competency feature, allowing you to refine partner searches based on your needs.

6. **Even if we do not purchase the license, can I just register on the platform to be found?**

Yes. Our current product is invite-only, but we'll soon offer a freemium version so businesses can create profiles. Existing profiles can be claimed and refined. We're excited to have you; your presence will benefit us both.
